Killowott-PIM PLAN

Title: PIMSync - Product Information Management for WooCommerce

Problem: Store owners manage products in Excel, hard to sync to WooCommerce.

Solution: A PIM dashboard that pushes/pulls products to WooCommerce via REST API.

Tech Stack: http://Next.js 14, Tailwind, http://Node.js API, WooCommerce REST API, MySQL / Local Storage.

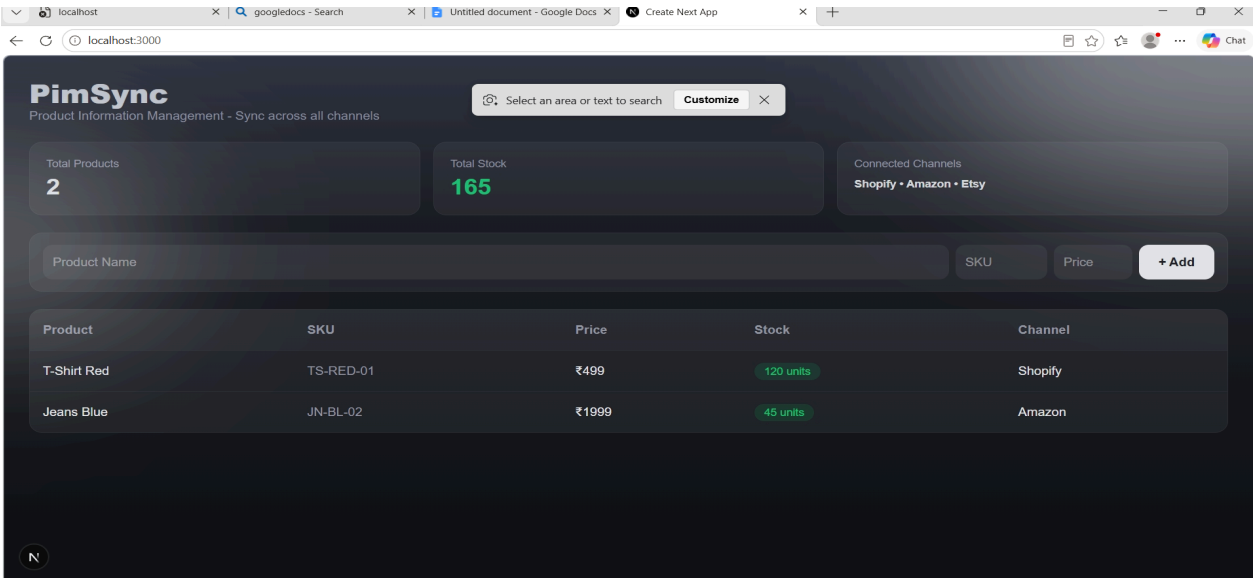

Key Features:

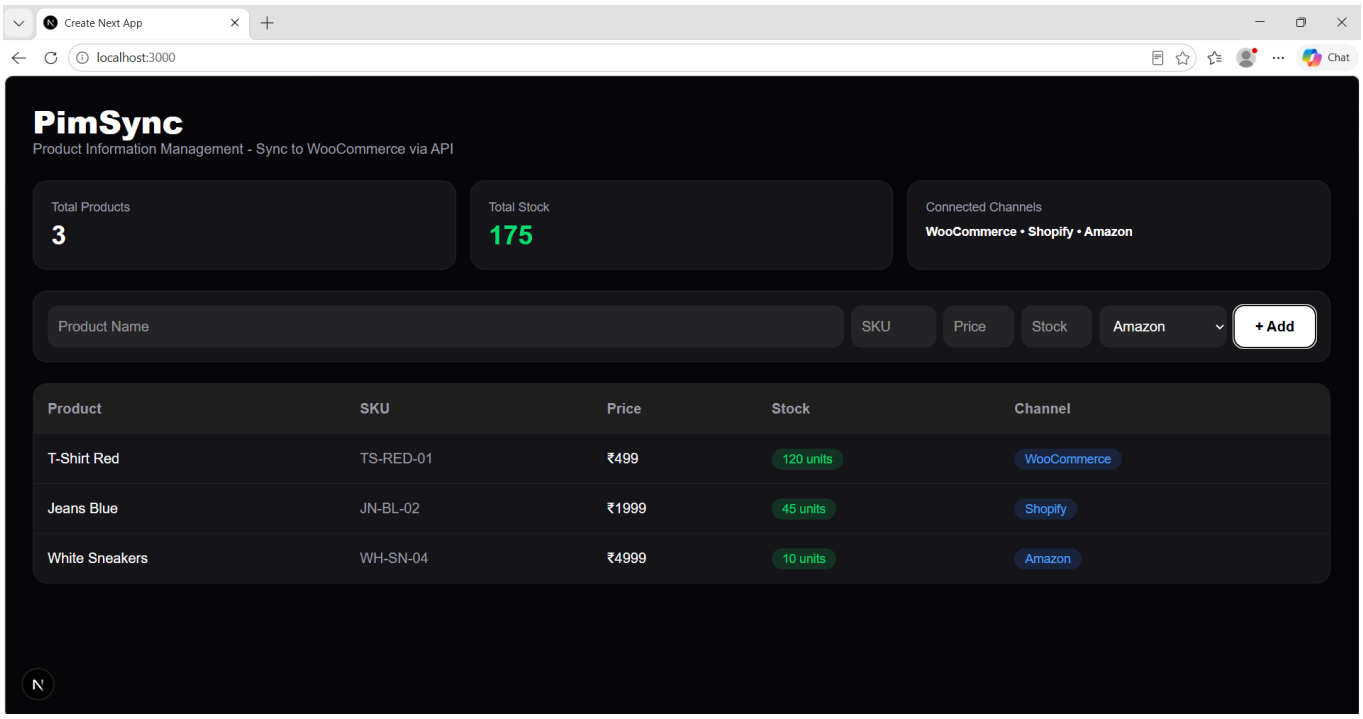

1. Product Catalog Management (add/edit/bulk)
2. Attribute Handling (size, color, custom attributes)
3. Data Synchronization (PIM <-> WooCommerce sync button + logs)

Architecture: Frontend (Next.js) -> Backend API (Next API routes) -> WooCommerce API -> WooCommerce Store

Assumptions: Using a test WooCommerce store, demo API keys

Impact: Saves 80% time for store managers
